Summary

Product-minded frontend engineer with around two years of experience building real, production web applications. I work end-to-end: R&D, flow discussions, and business requirements through to production-ready React and Next.js products.

Experience

Frontend Engineer

12/2025 — Present

Xeven Solutions · COVIS AI — AI-powered multi-tenant SaaS platform

- Develop and maintain the frontend of a multi-tenant SaaS platform serving many customers from a single codebase.
- Contribute to product R&D and user-flow discussions, turning business requirements into consistent experiences across organizations and roles.
- Build complex dashboards, scalable architecture, and product workflows with Next.js, Tailwind CSS, Shadcn, RTK Query, and Sentry.

Associate Software Engineer

10/2024 — 12/2025

HazelSoft · FR-Survey — restaurant management system

- Built responsive interfaces for shift operations, customer feedback, reviews, and performance visibility.
 - Worked with React, Redux, Axios, MUI, and React-Bootstrap, aligned with business requirements and restaurant team workflows.
-

Projects

COVIS AI — AI-powered platform for client management, tasks, business development, and onboarding.
covis.ai

FR-Survey — Restaurant management & survey platform: QR ordering, real-time kitchen display, dashboards.

Car Management System — Role-based app with real-time chat, notifications, and Firebase-backed data.

Education

BS Computer Science — Abdul Wali Khan University, Nowshera, Pakistan (2021 — 2025)

Skills

React.js · Next.js · JavaScript · Tailwind CSS · Redux Toolkit · RTK Query · Shadcn · MUI · Axios · Firebase · Sentry
